By using the following directions, Baker Media states that the classroom screens will be clearer.

On the Start Menu Bar, point your cursor on the blue box and RIGHT CLICK

When you right click, you will get a pop-up box, click on “Graphic Options” then click on Graphics Properties, you will then get another pop-up box, as seen below.

In the pop-up box, using the arrows, scroll to 1024 by 768 (resolution), then click OK. This is computer specific and by account. This means that once you do it on a computer, you do not need to do it again, ON THAT COMPUTER. However, if someone else uses that computer, they will have to do it too. If the blurry-ness does not bother you, disregard.
